- MAGCELL®
- vocaSTIM®
Dear Readers

PHYSIOMED has been developing and selling medical equipment for physical and biomechanic therapy and diagnostics for more than forty years - with increasing success. And not without reason. Excellent quality, sustainability, after sales service and maximum function are not mere words to us. We also work tirelessly to take rehabilitation medicine to the next technical level. And in doing so, we explore new paths. We not only offer you traditional physical therapy products, but also develop – often in cooperation with scientific partners - completely new therapy concepts (like for instance DEEP OSCILLATION® or vocaSTIM®).

We believe in giving you equipment that allows you to treat patients efficiently, in a gentle, effective, and above all, safe manner. With a constant focus on patient well-being and the success of your treatment, we combine tradition with innovation. So while we continue to uphold ‘clean currents’ (more details on page 17), we also aim to hone and perfect your tools of the trade, for instance with our automated TPS ultrasound dosage strategy or the new 360° ultrasound transducer (see page 31 and 33). But why not browse through our range and see for yourself?

Our greatest achievement is winning your trust!

Dr. Jens Reinhold
CEO
PHYSIOMED ELEKTROMEDIZIN AG

PHYSIOMED equipment complies with the latest safety standards and regulations of the Medical Device Ordinance, is manufactured in accordance with current quality assurance standards and bears the official CE Marking in accordance with Directive 93/42/EEC.
PHYSIOMED ELEKTROMEDIZIN AG is one of the world-wide leading producers of high quality equipment for traditional and innovative physical therapy. The PHYSIOMED name stands for outstanding product quality, cutting-edge technological solutions, and excellent value for money.

The German company focuses on equipment for treatment in the fields of rehabilitation, sports, aesthetic and veterinary medicine. Besides traditional treatment forms like electro-, ultrasound-, vacuum application, laser-, shortwave-, microwave-, traction-, cryo-, magneto- and shockwave therapy, PHYSIOMED has also made a name for itself with several innovative and clinically-tested therapy approaches:

• DEEP OSCILLATION® – biologically effective oscillations in tissue based on an electrostatic field
• MAGCELL® – electrode-free electrotherapy
• vocaSTIM® – therapy concept for the treatment of larynx paresis and dysphagia

In addition, PHYSIOMED also offers CON-TREX® and BfMC biomechanical testing, training and therapy systems.

PHYSIOMED currently exports its products to more than 80 countries worldwide. At the same time, the company, which is engaged in international research, maintains numerous cooperative efforts with universities and the continuous exchange of information with renowned scientists and leading physicians. Our products’ outstanding performance, suitability for daily use and high level of innovation are based on our experience since 1973 and continuous communication with practicing therapists.

We make every effort to keep our products safe for the patient and the therapist, and to do this we make sure our safety functions go beyond official legal requirements. Our safety features serve as new benchmarks, such as our emergency stop pushbutton, the automatic current cut-off if an electrode fails or a menu to prevent burns caused by current with a high galvanic content.
Combination therapy units

PHYSIOMED combination therapy units enable you to start therapy with maximum speed and ease: direct selection of current or therapy form, over the indication index or program memory. During treatment you have a constant overview of all parameters and timers. With decades of proven use, PHYSIOMED one-button operation permits fast intuitive control. A wide variety of safety features prevent malfunctions on all levels. For instance, a warning signal can be emitted when the recommended intensity is exceeded in relation to the selected electrode size. The emergency shut-off function can be activated over the intensity control and manual keys to ensure increased safety for both therapists and patients.

Thanks to the individual selection of additional parameters (pulse length and form, frequency, bursts, biphasic application, galvanic base etc.) the characteristics of current forms can be precisely adjusted to the desired treatment. Diagnostics programs, exhaustive indication lists with practical information, diagrams and treatment animations and patient database with ‘potpourri’ function simplify electrotherapy treatment.

Choose between two ergonomically designed transducers with surface areas of 2.5 cm² or 5 cm², which are also suitable for subaqueous treatment. The biocompatible and exceptionally durable titanium transducers afford maximum safety and reliability in terms of performance and prevent metallurgical deposits. Along with continuous or pulsed energy output (4 duty cycles [1:10, 1:5, 1:3, 2:5]), optical and acoustic coupling controls ensure efficient therapy.

As an absolute innovation, the IONOSON-DO-Evident even offers deep oscillation therapy in the fourth channel (more details from page 76). Please see opposite for an overview of the specifications for the individual units.

*Modulated interference current  **Currents G, GMC, DF, MF, CP, LF, MENS, AMF excepted
IONOSON-Evident

IONOSON-DO-Evident

The new benchmark in electro-, ultrasound and simultaneous therapy in a contemporary design - now optionally available with deep oscillation

The identical IONOSON-DO-Evident offers deep oscillation therapy on the fourth channel as an additional feature (see page 76 ff. for more details) and thus comes with a wider selection of standard accessories.
**ELECTROTHERAPY**

Two-channel electrotherapy including 22 currents

Diagnostics: the user-guided navigation makes the diagnostic evaluation selfexplanatory and effective (see page 7)

Alternating and simultaneous stimulation

Spasticity treatment acc. to Hufschmidt or Jantsch

Manual release key for emergency shut-off or intentional exercises

Warning in case of intensity exceeding

**ULTRASOUND THERAPY**

The ergonomic ultrasound transducers 360° offer maximum safety and reliability in terms of power output. They combine 1 and 3 MHz ultrasound in an extremely durable and biocompatible titanium transducer, thereby excluding metallurgical deposits and are also suitable for subaqueous treatment. The innovative joint technology enables different types of handle and thus user-friendly operation, aimed at meeting the demands of different treatment settings and anatomical conditions.

Continuous or pulsed energy output (4 duty cycles [1:10, 1:5, 1:3, 2:5])

TPS ultrasound dosage (see page 31)

**GENERAL FEATURES**

Perfected user guidance through combination of touch screen and PHYSIOMED one-button operation

8" colour monitor

Swivel and tilt mount for optimum monitor alignment at all times

Comprehensive overview of the therapy parameters including all therapy timers

Fastest therapy start: direct, through program memory or indications index

Treatment index with intelligent filtering functions based on body region, therapy form, desired therapy effect or per alphabet for quick location of the desired treatment proposal

Extensive therapy and dosage suggestions and detailed animations illustrating treatment, which can be viewed during therapy at the touch of a button

Patient database for max. 100 entries: up to 10 electrotherapy and five ultrasound settings as well as five diagnostic findings can be saved and configured as potpourris per patient

Multifunctional intensity controls with emergency stop function and quick switching between channels

Logical colour coding of electrotherapy and vacuum application accessories for quick and accurate allocation of channels and polarity

Vacuum application with PHYSIOVAC-Evident see page 40 (option)

Simultaneous therapy

**TECHNICAL DATA**

Protection class 1, type BF

Power connection 115 / 230 VAC ± 10% DO Version: 100-115 / 230 VAC ±10%

Mains frequency 50 – 60 Hz

Current consumption 0.6 A – 1.2 A

Power consumption 130 VA; DO Version: 150 VA

Power output stimulation current max.

GM, MIN = 1000 μA; G = 25 mA at 500 Ohm; HV, HV5, HV6 = 140 mA at 500 Ohm; DR, MP, LP, HS = 10 mA at 500 Ohm; UR, G50, IG50, FM, STOCH, IF, AIF, MT, KOTS = 75 mA at 500 Ohm; IF, AMF, MT, KOTS = 100 mA at 500 Ohm

Power output ultrasound max.

Effective surface 2.5 cm² transducer 5 cm² transducer

Ultrasound frequency 1 MHz 3 MHz 1 MHz 3 MHz

Mean power density 1 W/cm² 1 W/cm² 1 W/cm² 1 W/cm²

DO Version: Output voltage max. 400 V

DO Version: Load impedance 10 Ω

DO Version: Output frequency 5 – 250 Hz

Dimensions (W x H x D) 260 x 380 x 370 mm (monitor unfolded)

Weight 10.2 kg

**STANDARD ACCESSORIES**

[2] Elastic velcro straps (10 x 125 cm)

[2] Elastic velcro straps (6 x 80 cm)

[1] Electrode test pen

[1] Mains cable

[1] Operating instructions

[1] Patient lead

[2] Plate electrodes EF 10

[1] Electrode test pen grey for adhesive electrodes

[1] Oscillator head Ø 5,0 cm

[1] Oscillator head Ø 9.5 cm

[1] Patient lead DEEP OSCILLATION®

[1] PHYSIOPADS adhesive electrode for DEEP OSCILLATION® (set of 4)

[1] Powder

[1] Special gloves size M (100 pcs.)

[1] Titanium neutral element

**SPECIAL FEATURES**

**ELECTROTHERAPY**

Combination therapy unit IONOSON-Evident on an Evident trolley

**ULTRASOUND THERAPY**

The ergonomic ultrasound transducers 360° offer maximum safety and reliability in terms of power output. They combine 1 and 3 MHz ultrasound in an extremely durable and biocompatible titanium transducer, thereby excluding metallurgical deposits and are also suitable for subaqueous treatment. **ELECTROTHERAPY**

Combination therapy unit IONOSON-Evident on an Evident trolley

**ULTRASOUND THERAPY**

The ergonomic ultrasound transducers 360° offer maximum safety and reliability in terms of power output. They combine 1 and 3 MHz ultrasound in an extremely durable and biocompatible titanium transducer, thereby excluding metallurgical deposits and are also suitable for subaqueous treatment. The innovative joint technology enables different types of handle and thus user-friendly operation, aimed at meeting the demands of different treatment settings and anatomical conditions.

Continuous or pulsed energy output (4 duty cycles [1:10, 1:5, 1:3, 2:5])

TPS ultrasound dosage (see page 31)
IONOSON-Expert
IONOSON-IF-Expert

Professional electro-, ultrasound and simultaneous therapy for hospitals and rehab centres

As identical and less expensive version without diagnostics, the IONOSON-IF-Expert offers all medium frequency current forms as well as G, HV and TENS.
SPECIAL FEATURES

**ELECTROTHERAPY**
- Two-channel electrotherapy including 21 currents
- Differentiated diagnostics menu (see page 7)
- Alternating and simultaneous stimulation

**ULTRASOUND THERAPY**
- The ergonomic ultrasound transducers offer maximum safety and reliability in terms of power output. They combine 1 and 3 MHz ultrasound in an extremely durable and biocompatible titanium transducer, thereby excluding metallurgical deposits and are also suitable for subaqueous treatment.
- Continuous or pulsed energy output (4 duty cycles [1:10, 1:5, 1:3, 2:5])

**GENERAL FEATURES**
- Intuitive PHYSIOMED one-button operation
- Comprehensive overview of the therapy parameters including all therapy timers
- Fastest therapy start: direct, through program memory or indications index
- Extensive treatment index featuring therapeutic information, dosage proposals and application graphics
- Patient database and potpourris
- Logical colour coding of electrotherapy and vacuum application accessories for quick and accurate allocation of channels and polarity
- Vacuum application with PHYSIOVAC-Expert see page 42 (option)
- Simultaneous therapy

IONOSON-Jubilee

Exceptionally user-friendly one-channel electrotherapy, ultrasound and simultaneous therapy
**SPECIAL FEATURES**

**ELECTROTHERAPY**
- 17 medium and low-frequency currents
- I/T curve
- Manual release key for emergency shut-off or intentional exercises

**ULTRASOUND THERAPY**
- The ergonomic ultrasound transducers offer maximum safety and reliability in terms of power output. They allow for 1 MHz ultrasound in an extremely durable and biocompatible titanium transducer, thereby excluding metallurgical deposits and are also suitable for subaqueous treatment.
- Continuous or pulsed energy output (4 duty cycles [1:10, 1:5, 1:3, 2:5])

**GENERAL FEATURES**
- Intuitive PHYSIOMED one-button operation
- Comprehensive overview of the therapy parameters
- Fastest therapy start: direct, through program memory or indications index
- Extensive treatment index featuring therapeutic information, dosage proposals and application graphics
- Patient database and potpourris
- Logical colour coding of electrotherapy and vacuum application accessories for quick and accurate allocation of channels and polarity
- Vacuum application with PHYSIOVAC-Jubilee see page 43 (option)
- Simultaneous therapy

**TECHNICAL DATA**

- **Protection class**: 1, type BF
- **Power connection**: 230 V ±10 % or 115 V ±10 %
- **Mains frequency**: 50 – 60 Hz
- **Current consumption**: 0.4 A (at 230 V) or 0.8 A (at 115 V)
- **Power consumption**: 86 VA
- **Power output stimulation current max.**: 75 mA at 500 Ohm; G = 25 mA at 500 Ohm
- **Power output ultrasound max.**
  - **Effective surface**: 2.5 cm² transducer, 5 cm² transducer
  - **Ultrasound frequency**: 1 MHz, 1 MHz
  - **Mean power density**: 3 W/cm², 3 W/cm²
- **Dimensions (W x H x D)**: 394 x 133 x 348 mm
- **Weight**: 5.5 kg

**STANDARD ACCESSORIES**

- [1] Accessory tray
- [1] Elastic velcro strap (10 x 125 cm)
- [1] Elastic velcro strap (6 x 80 cm)
- [1] Mains cable
- [1] Operating instructions
- [1] Patient lead
- [2] Plate electrodes EF 50
- [1] Short introduction to electrotherapy
- [1] Short introduction to ultrasound therapy
- [1] Ultrasound gel 1 l
- [1] Ultrasound transducer 1 MHz 5 cm² or 2.5 cm²
- [2] Viscose covers EF 50

Combination therapy unit IONDSON-Jubilee and vacuum application unit PHYSIOVAC-Jubilee on a Jubilee trolley
IONOSON-Basic

Electro-, ultrasound and simultaneous therapy unit in a compact design and for mobile use

Ultrasound treatment with IONOSON-Basic

MOBILE VERSION
IONOSON-Basic is also available battery-operated with practical transportation bag!
SPECIAL FEATURES

**ELECTROTHERAPY**
- Two-channel electrotherapy including 19 currents
- Alternating and simultaneous stimulation
- Manual release key for emergency shut-off or intentional exercises

**ULTRASOUND THERAPY**
- The ergonomic ultrasound transducers offer maximum safety and reliability in terms of power output. They combine 1 and 3 MHz ultrasound in an extremely durable and biocompatible titanium transducer, thereby excluding metallurgical deposits and are also suitable for subaqueous treatment.
- Continuous or pulsed energy output (4 duty cycles [1:10, 1:5, 1:3, 2:5])

**GENERAL FEATURES**
- Intuitive PHYSIOMED one-button operation
- Comprehensive overview of the therapy parameters including all therapy timers
- Fastest therapy start: direct, through program memory or indications index
- Extensive treatment index featuring therapeutic information, dosage proposals and application graphics
- Patient database and potpourris
- Multifunctional intensity controls with emergency stop function
- Logical colour coding of electrotherapy and vacuum application accessories for quick and accurate allocation of channels and polarity
- Vacuum application with PHYSIOVAC-Basic see page 44 (option)
- Simultaneous therapy

TECHNICAL DATA

- Protection class: 1, type BF
- Power connection: 100 – 240 VAC ±10%
- Mains frequency: 50 – 60 Hz
- Current consumption: 0.5 A – 1.1 A
- Power consumption: 140 VA
- Power output stimulation current max.: GM, MENS = 1000 μA; G = 25 mA at 500 Ohm; HV, TENS = 140 mA at 500 Ohm; DF, FF, EF, LF, UR, IG30, FM, STOCF, Fal; 1/8 = 75 mA at 500 Ohm; IFM, AMF, KOTS = 100 mA at 500 Ohm
- Power output ultrasound max.: Effective surface: 2.5 cm² transducer; 5 cm² transducer
  - Ultrasound frequency: 1 MHz; 3 MHz
  - Mean power density: 3 W/cm²; 1 W/cm²
- Dimensions (W x H x D): 315 x 104 x 335 mm
- Weight: 2.6 kg (line-operated model); 2.8 kg (battery-operated model)

STANDARD ACCESSORIES

- ELastic velcro straps (10 x 125 cm) [2]
- ELastic velcro straps (6 x 80 cm) [2]
- Mains cable [1]
- Manual release key [1]
- Operating instructions [1]
- Patient lead [1]
- Plate electrodes EF 50 [4]
-便携式电疗仪
- 环形电极
- 便携式超声波治疗仪
- 便携式真空治疗仪
Electrotherapy

Electrotherapy is an important element of physical therapy. Current stimulation treats the tissue via electrodes (plate electrodes, adhesive electrodes, vacuum electrodes, or special electrodes such as punctiform or pad electrodes) on the selected areas. Depending on the current mode and the selection of parameters (i.e. impulse form, impulse duration, pause time, frequency, intensity) the stimulation current may have significant effects in the following areas of treatment:

» Pain reduction
» Stimulation of blood circulation and trophic enhancement
» Nerve stimulation, for example the training of innervation and treatment of paralysis
» Muscle stimulation to build up/maintain muscles
» Muscular relaxation
» Iontophoresis

The different electrotherapy currents can be classified according to their generation and specific method of treating the tissue:

» Medium-frequency current: this is an alternating current, derived from superposition of a basic frequency (2–9.5 KHz) and a modulation frequency (0-250 Hz). This superposition takes place within the equipment for AMF current (amplitude modulated medium frequency current) as well as for medium-frequency currents for muscle stimulation (e.g. KOTS). The previously modulated current can therefore be applied via only two electrodes on the patient. With classic interference current IF, however, superposition delivers both frequencies when it reaches the patient’s tissue. For this reason, in this case it is essential to always apply four electrodes for treatment. The high therapeutic effectiveness of the medium-frequency current is achieved with minimum skin irritation and broad penetration and is more acceptable to patients.

» Low-frequency current: an impulse current with frequencies under 1000 Hz is classified as a low-frequency current. The total range of application is covered by the different low-frequency currents DF, MF, CP, LP (diadynamic currents), UR (ultrastimulation current), HV (high voltage current), FaS (faradic current), TENS (mono- or biphasic rectangular impulse), MENS (variable microcurrent), IG 30 and IG 50 (impulse galvanisation), FM (frequency-modulated current), STOCH (stochastic current) and T/R (exponential current). In contrast to medium-frequency current, low frequency current can also be used for treatment of peripheral paralysis.

» Galvanic current (G) is a direct current that ensures a constant energy current flow through the tissue. Galvanic current is primarily used for stimulation of blood flow and pain reduction as well as iontophoresis (diffusion of medicaments into the tissue with the aid of current).

For more detailed information, please read our comprehensive brochure “Short introduction to electrotherapy”, which contains many practical examples.
Electrotherapy units

PHYSIOMED electrotherapy units enable you to start therapy with maximum speed and ease: direct selection of current, over the indication index or program memory. During treatment you have a constant overview of all parameters and timers. With decades of proven use, PHYSIOMED one-button operation permits fast intuitive control. A wide variety of safety features prevent malfunctions on all levels. For instance, a warning signal can be emitted when the recommended intensity is exceeded in relation to the selected electrode size. The emergency shut-off function can be activated over the intensity control and manual keys to ensure increased safety for both therapists and patients.

Thanks to the individual selection of additional parameters (pulse length and form, frequency, bursts, biphasic application, galvanic base etc.) the characteristics of current forms can be precisely adjusted to the desired treatment. Diagnostics programs, exhaustive indication lists with practical information, diagrams and treatment animations and patient database with ‘potpourri’ function simplify electrotherapy treatment.

Please see opposite for an overview of the specifications for the individual units.

*Modulated interference current  **Currents G, GMC, DF, MF, CP, LP, MENS, AMF excepted
PHYSIODYN-Evident

The new benchmark in electrotherapy and diagnostics in a contemporary design
Protection class: 1, type BF
Power connection: 115 / 230 VAC ±10 %
Mains frequency: 50 – 60 Hz
Current consumption: 0.35 A – 0.7 A
Power consumption: 80 VA
Power output stimulation current max.:
- GMC, MENS = 1000 μA; G = 25 mA at 500 Ohm; HV, HVS, TENS = 140 mA at 500 Ohm; DF, MF, CP, LP, KS = 70 mA at 500 Ohm; UR, IG30, IG50, FM, ST0CH, FaS, TR = 75 mA at 500 Ohm; IF, AMF, MT, KOTS = 100 mA at 500 Ohm
Dimensions (W x H x D): 260 x 350 x 370 mm (monitor unfolded)
Weight: 8.1 kg

SPECIAL FEATURES

TECHNICAL DATA

Electrotherapy
- Two-channel electrotherapy including 22 currents
- Diagnostics: the user-guided navigation makes the diagnostic evaluation selfexplanatory and effective (see page 19)
- Alternating and simultaneous stimulation
- Spasticity treatment acc. to Hufschmidt or Jantsch
- Manual release key for emergency shut-off or intentional exercises
- Warning in case of intensity exceeding

General features
- Perfected user guidance through combination of touch screen and PHYSIOMED one-button operation
- 8” colour monitor
- Swivel and tilt mount for optimum monitor alignment at all times
- Comprehensive overview of the therapy parameters including all therapy timers
- Fastest therapy start: direct, through program memory or indications index
- Treatment index with intelligent filtering functions based on body region, desired therapy effect or per alphabet for quick location of the desired treatment proposal
- Extensive therapy and dosage suggestions and detailed animations illustrating treatment, which can be viewed during therapy at the touch of a button
- Patient database for max. 100 entries: up to 10 electrotherapy settings as well as five diagnostic findings can be saved and configured as potpouri per patient
- Multifunctional intensity controls with emergency stop function and quick switching between channels
- Logical colour coding of electrotherapy and vacuum application accessories for quick and accurate allocation of channels and polarity
- Vacuum application with PHYSIOVAC-Evident see page 40 (option)

Standard accessories
- Elastic velcro straps (10 x 125 cm)
- Elastic velcro straps (6 x 80 cm)
- Electrode test pen
- Mains cable
- Manual release key
- Operating instructions
- Patient lead
- Plate electrodes EF 10
- Plate electrodes EF 50
- Short introduction to electrotherapy
- Viscose covers EF 10
- Viscose covers EF 50
PHYSIOMED-Expert

PHYSIOMED-IF-Expert

Professional electrotherapy and diagnostics for hospitals and rehab centres

As identical and less expensive version without diagnostics, the PHYSIOMED-IF-Expert offers all medium frequency current forms as well as G, HV and TENS

Intentional exercises with PHYSIOMED-Expert
Protection class 1, type BF
Power connection 230 V ±10% or 115 V ±10%
Mains frequency 50 – 60 Hz
Current consumption 0.3 A (at 230 V) or 0.6 A (at 115 V)
Power consumption 68 VA
Power output stimulation current max. 75 mA at 500 Ohm, G = 25 mA at 500 Ohm
Dimensions (W x H x D) 345 x 133 x 348 mm
Weight 5.1 kg

### SPECIAL FEATURES

#### ELECTROTHERAPY

- Two-channel electrotherapy including 21 currents
- Differentiated diagnostics menu (see page 19)
- Alternating and simultaneous stimulation

#### GENERAL FEATURES

- Intuitive PHYSIOMED one-button operation
- Comprehensiv overview of the therapy parameters including all therapy timers
- Fastest therapy start: direct, through program memory or indications index
- Extensive treatment index featuring therapeutic information, dosage proposals and application graphics

#### ELECTROTHERAPY

- Two-channel electrotherapy including 21 currents
- Differentiated diagnostics menu (see page 19)
- Alternating and simultaneous stimulation

#### GENERAL FEATURES

Ultrasound therapy

Ultrasound therapy, along with electrotherapy, is one of the popular treatment forms of physical therapy. Therapeutic ultrasound is used at a frequency of 1 MHz or 3 MHz, as continuous output or pulsed output in different duty cycles. Ultrasound therapy is classified as mechanical thermal therapy due to its complex effects. Depending on therapy parameters (therapy frequency, output type, dose, therapy duration and mode), the emphasis is on a thermal effect that results from ultrasound therapy (thermal growth and reflection from tissue barriers such as bones or joints) or a micromassage in the treated tissue segments. The effects of ultrasound therapy can be summarised as follows:

» Hyperemisation
» Acceleration of metabolic function (microcirculation, diffusion processes)
» Increasing the tensibility of connective tissue structures (collagen fibres)
» Alleviation of pain
» Muscular relaxation and spasm resolution
» Acceleration of the healing process
» Stimulation of fracture healing

Since ultrasound is reflected by air, you should use a coupling agent (ultrasound gel) or connect under water (subaqueous) for optimum conduction of the ultrasonic waves from the transducer to the tissue.

According to current knowledge an objectively reproducible dosing in ultrasound therapy, thus also valid for scientific works, is only possible with the innovative ultrasound dosing TPS (more information on page 31).

For more detailed information, please read our comprehensive brochure “Short introduction to ultrasound therapy”, which contains many practical examples.

Simultaneous therapy

The transducer acts as the electrical stimulation cathode and a plate or vacuum electrode acts as anode in simultaneous therapy using electrotherapy and ultrasound (with a cumulative therapy effect). Simultaneous therapy is available by using combination units as well as by combining any electrotherapy unit with the related ultrasound therapy unit. Simultaneous therapy is used particularly in pain therapy. Current selection combined with ultrasound parameters ensure a wide variety of treatment combinations.
Ultrasound therapy units

PHYSIOMED ultrasound therapy units enable you to start therapy with maximum speed and ease: direct selection, over the indication index or program memory. During treatment you have a constant overview of all parameters. With decades of proven use, PHYSIOMED one-button operation permits fast intuitive control.

Exhaustive indication lists with practical information, diagrams and treatment animations and patient database additionally simplify ultrasound therapy. Choose between two ergonomically designed transducers with surface areas of 2.5 cm² or 5 cm², which are also suitable for subaqueous treatment. The biocompatible and exceptionally durable titanium transducers afford maximum safety and reliability in terms of performance and prevent metallurgical deposits. Along with continuous or pulsed energy output (4 duty cycles [1:10, 1:5, 1:3, 2:5]), optical and acoustic coupling controls ensure efficient therapy.

Please see opposite for an overview of the specifications for the individual units.

### Ultrasound Dosing Strategy with TPS

The acronym TPS is a compilation of the Spanish words “Tiempo” (time), “Potencia” (output) and “Superficie” (surface). The innovative dosing strategy of the Spanish electrotherapy specialist Prof. J. M. Rodríguez Martín guarantees the delivery of a well-defined amount of energy in J/cm² to the tissue taking into account the treatment area and all treatment parameters. In order to obtain a precise surface indication, the treatment area is graphically defined and measured, for example using a skin marker. After entering the area into the therapy unit, the required treatment time corresponding to the desired energy quantity is calculated, taking into account dosage, energy output, size of the treatment head and frequency. Thus, TPS allows for the first time ever, for an objectively reproducible dosage in ultrasound therapy, thus also valid for scientific works.
PHYSIOSON-Evident

The new benchmark in ultrasound therapy in a contemporary design
ULTRASOUND THERAPY

The ergonomic ultrasound transducers 360° offer maximum safety and reliability in terms of power output. They combine 1 and 3 MHz ultrasound in an extremely durable and biocompatible titanium transducer, thereby excluding metallurgical deposits and are also suitable for subaqueous treatment. The innovative joint technology enables different types of handle and thus user-friendly operation, aimed at meeting the demands of different treatment settings and anatomical conditions.

- Continuous or pulsed energy output (4 duty cycles [1:10, 1:5, 1:3, 2:5])
- TPS ultrasound dosage (see page 31)

GENERAL FEATURES

Perfected user guidance through combination of touch screen and PHYSIOMED one-button operation

- 8” colour monitor
- Swivel and tilt mount for optimum monitor alignment at all times
- Comprehensive overview of the therapy parameters
- Fastest therapy start: direct, through program memory or indications index
- Treatment index with intelligent filtering functions based on body region or per alphabet for quick location of the desired treatment proposal
- Extensive therapy and dosage suggestions and detailed animations illustrating treatment, which can be viewed during therapy at the touch of a button
- Patient database for max. 100 entries: up to 5 ultrasound settings can be saved and configured as pot-pourris per patient

5. Ultrasound gel (250 ml)
6. Ultrasound transducer 1 MHz 5 cm² or 2.5 cm²

Electrotherapy unit PHYSIODYN-Basic with vacuum application unit PHYSIOVAC-Basic and ultrasound therapy unit PHYSIOSON-Basic on an Universal trolley
Vacuum application devices make it possible for you to apply stimulation currents via vacuum electrodes. The vacuum electrodes are gently affixed to the patient’s skin with the help of adjustable underpressure. This method is especially suited for affixing electrodes to the buttocks, since there is no need for expensive fixation aids.

The suction action and the associated blood flow stimulation result in improved conduction qualities for the currents. With smooth adjustments, pulsing waves of suction permit enhanced stimulation during therapy.

Thanks to special suctionwave cups (Luran), vacuum application units are also suited for manual suction wave massage.

Examples of accessories for vacuum application

Luran suctionwave cups (set) in four different sizes (2, 3, 4 und 6 cm in diameter) for suctionwave therapy.

Thanks to their soft shape, the self-closing Vacustop electrodes adapt ideally to the curves of the body, available in three sizes (3, 6 and 9 cm in diameter).
PHYSIOVAC-Evident

User-friendly vacuum application with Evident-Line devices
SPECIAL FEATURES

VACUUM APPLICATION
- Pulsation adjustable in steps of 2 per minute
- Vacuum adjustable in steps of 0.05 bar
- Vibration and noise-optimised
- Electric lock mechanism for channels for operation without blind plugs (simultaneous therapy excepted)
- Water separator with safety switch for automatic shut-off (with audible and visual warning)
- Autonomous suctionwave therapy
  - Any desired vacuum application can be selected in each stimulation current channel, while in the remaining channel (channels) a free choice of the desired therapy form is simultaneously possible
- Operation directly over the connected electro- or combination therapy unit or autonomously

GENERAL FEATURES
- Fastest therapy start
- Logical colour coding of electrotherapy and vacuum application accessories for quick and accurate allocation of channels and polarity

PHYSIOVAC-Basic (4 channel)
Laser therapy

Laser therapy is used in various therapy fields. In contrast to hard lasers used in surgery (30 W and higher), laser therapists work with the athermal, therapeutic, low level laser (less than 700 mW). As for physical therapy, the infrared diode laser is now the common means of treatment. This laser excels over other types of lasers in penetration depth, bio-stimulative effect and ease of handling. The assignment of laser therapy to light therapy is based on its various complex photobiological effects. These effects can be summarised as follows:

» Enhanced cellular energy balance
» Antiphlogistic effect
» Antiedematous effect
» Microcirculatory effect
» Tissue reparative effect
» Analgetic effect

You can choose between two forms of application according to the indication. An ultra-precise laser pen is used to treat tender points, trigger points, paraspinal points, etc. if laser application on a very small area (less than 1 cm²) is required. Laser pens are also the ideal medium for gentle laser acupuncture, which like needle acupuncture, uses the direct interaction between the body’s meridians and related functions. For the treatment of larger areas of skin in cases like traumas, joint inflammations or dermatologic indications, we recommend using the laser shower, which can be moved over/along the treatment area, if necessary. The laser comb is especially wellsuited to treat regions with body hair, such as the scalp.

For more detailed information please read our comprehensive brochure “Short introduction to laser therapy”, which contains lots of practical examples.
LAS-Expert

Effective laser therapy with laser pen, shower or comb

The LAS-Expert laser therapy unit features an infrared diode laser with a wavelength of 785 nm, which is scientifically proven to offer the best values in penetration depth and biostimulation efficiency.

In order to ensure a safe and effective treatment, the LAS-Expert has a software that automatically calculates and displays the treatment parameters according to the entry of the desired energy density and treatment surface as well as the applicator chosen.
SPECIAL FEATURES

LASER THERAPY

- Wavelength of 785 nm – best value for penetration depth and biostimulation
- Automatic calculation of treatment parameters
- Continuous output, multi-, alpha- and Nogier-frequencies (see laser probes)
- Laser pen for key point treatment and laser puncture (including acupuncture search function with automatic start/stop function) with continuous output, multi-frequency and Nogier-frequencies
- Optionally optical waveguides are available as autoclavable attachments for the laser pen for treatments in the fields of dentistry and ENT
- Laser shower with 14 laser diodes for application on larger surfaces with continuous output, multi-frequency and alpha frequency (e.g., in trauma, arthropathy, large muscular hypertony and dermatology)
- Laser comb with 14 laser diodes for application on larger surfaces with continuous output, multi-frequency and alpha-frequency (e.g., for trichologic applications such as hair and scalp disorders)

GENERAL FEATURES

- Intuitive PHYSIOMED one-button operation
- Comprehensive overview of the therapy parameters
- Fastest therapy start: direct, through program memory or indications index
- Extensive treatment index featuring therapeutic information, dosage proposals and application graphics
- Patient database

LASS-Basic

Effective laser therapy with laser shower

The therapeutic laser shower LASS-Basic is used for application on larger surfaces (e.g., in trauma, arthropathy, hypertonia of large muscles and dermatology). It works with 14 laser diodes and offers continuous output, multi-frequency and alpha-frequency.

The infrared diode laser with a wavelength of 785 nm provides the best values of penetration depth and biostimulation efficiency according to latest scientific conclusions.

Shockwave therapy

Shockwave therapy has been successfully used in urology for around three decades. For some time now it has also proved successful in modern pain therapy and trigger point treatment. The term ‘shockwave therapy’ refers to mechanical pressure pulses that are used in the human body for a therapeutic effect. The pulses expand as a wave, and when applied to the areas for treatment, stimulate the body’s regenerative capabilities.

Shockwaves influence large areas of the disease-affected body areas and speed up the self-healing process in a targeted manner. The metabolism is improved and blood circulation is stimulated locally to allow inflamed or damaged tissue to regenerate faster. Furthermore, painful calcific deposits in joints can be dissolved with shockwave therapy, so that in time they are absorbed, transported and released from the body over the bloodstream. Another application area is the treatment of trigger points. Triggers are painful knots around muscles and sinews. They often cause pain that need not necessarily occur near the trigger point, but in completely different areas of the body (remote trigger points).
The high-energy PHYSIOIMPACT-Evident permits targeted gentle and effective extracorporeal shockwave therapy. Besides starting therapy over indication and trigger point index or the patient database, all parameters can also be selected individually.

The ingenious coupling of shockwave intensity and treatment frequency in alternating or phased treatment is an outstanding achievement. During the treatment cycle a continuous controlled alternation of intensity and frequency is effected, which may protect cells. Even during treatment, the body's self-healing powers are triggered, as demonstrated by the tolerance of higher energy levels.

The ergonomically designed handpiece with superior material qualities can be fitted with three different sized applicator attachments, which are specially adjusted to the different indications.
SPECIAL FEATURES

SHOCKWAVE THERAPY

- High-energy shockwave maximum 0.58 mJ/mm²
- Linear, individually adjustable alternating or phased treatment coupled with shockwave intensity and treatment frequency
- 25 intensity levels
- Pulse mode from 1–12 Hz

1. Ergonomically designed lightweight handpiece

2. No limitation of shockwaves, guaranteed for 24 months of use

3. Three different applicator attachments adjusted for the indications

GENERAL FEATURES

- Intuitive touch screen operation
- 9,4" colour monitor
- Swivel and tilt mount for optimum monitor alignment at all times
- Comprehensive overview of the therapy parameters
- Fastest therapy start: direct, through program memory or indications index
- Extensive treatment index featuring therapeutic information, dosage proposals and application graphics

4. Trigger point index with detailed illustrations

5. Patient database

6. Remote maintenance

TECHNICAL DATA

- Protection class: 1, type BF
- Power connection: 108 V~ – 240 V~
- Mains frequency: 50/60 Hz
- Current consumption: 0.7 A
- Power consumption max.: 200 VA
- Energy flow density max.: 0.58 mJ/mm²
- Intensity levels: 25
- Impulse frequency: 1–12 Hz
- Dimensions (W x H x D): 245 x 450 x 350 mm
- Weight: 10.8 kg

STANDARD ACCESSORIES

- [1] Applicator attachment S
- [1] Applicator attachment M
- [1] Applicator attachment L
- [1] Contact gel
- [1] Handpiece with tubing connection
- [1] Mains cable
- [1] Operating instructions
- [1] Revision kit
- [1] Wipe and pen for touch screen
Shortwave therapy

The application of shortwave therapy generates warmth in tissue for which electric and magnetic fields are used. Shortwaves are applied either using the condensor field method or the coil field method.

With the condenser field method the treated body part is placed between two condenser plates (shell electrodes or soft rubber electrodes). A periodic charge exchange process occurs in the treated tissue under the influence of high frequency electrical alternating fields, which results in uniform heating through of all levels of the treated tissue segments.

The coil field method uses a coil in the form of a vortex current electrode (monode or diplode). The high frequency current flows through the coil, which creates a variable magnetic field in its environment. The magnetic field causes a predominant warming in tissue with good conductive structure, such as connective tissue and muscles.

In the impulse mode during the shortwave therapy, the focus is on the athermal effect with trophic enhancement and reflective influences on the vascular system. The local thermal effect dominates in continuous operation, causing improved cell metabolism, reduced viscosity of bodily fluids, higher tensibility of collagen fibres, circulation stimulation and manipulation of the nervous system. Shortwave therapy is therefore used predominantly in the fields of orthopaedics, traumatology, rheumatology as well as in ENT, urology, gynaecology and internal medicine for:

- Treatment of chronic inflammations
- Pain reduction
- Spasm reduction and muscular relaxation
- Treatment of acute and chronic infections
PHYSIOTHERM-S

Perfected shortwave therapy

The PHYSIOTHERM-S high-end shortwave therapy unit enables continuous and pulsed energy output for thermal and athermal applications. You can choose between the capacitor field method for uniform heating of all the tissue layers as well as the coil field method (optional) for selective treatment of tissue with good conductive structures, such as connective tissue and muscles. In addition to the graphic display of the effective power output, the ingenious automatic matching feature (dynamic matching) ensures the steady development of heat and prevents overdosage by reducing the power if there is a problem. The extremely well-shielded, high-frequency connection cables provide trouble-free operation.

The easily adjustable supporting arms ensure quick and exact electrode placement. The smooth running castors with latches ensure good mobility and secure positioning of the PHYSIOTHERM-S.

Shoulder treatment with a diplode
SPECIAL FEATURES

SHORTWAVE THERAPY
Continuous or pulsed power output
Matching function for steady development of heat and prevention of overdosage

ACCESSORIES
1. Plate electrodes available in three sizes (8, 12 and 16.5 cm in diameter)
2. Rubber capacitor electrodes for treatment using capacitor technology (18 x 12 cm or 25 x 14.5 cm)
3. Diode for shortwave therapy with coil field method
4. Monode (special eddy current electrode) for shortwave therapy with coil field method

GENERAL FEATURES
Intuitive PHYSIOMED one-button operation
Fastest therapy start: direct, through program memory or indications index
Extensive treatment index by medical fields featuring therapeutic information, dosage proposals and application graphics
Patient database

TECHNICAL DATA

Protection class 1, type BF
Power connection 230 V ±10% or 115 V ±10%  
Mains frequency 50 – 60 Hz
Current consumption 6 A (at 230 V) or 12 A (at 115 V)
Power consumption 1400 VA
Operating frequency 27.12 MHz
Power output max. Continuous operation 400 W
Impulse mode 1000 W
Impulse frequency 10 – 3010 Hz
Impulse duration 200 – 600 μs
Dimensions (W x H x D) 420 x 970 x 410 mm
Weight 60 kg

STANDARD ACCESSORIES

[2] Cable holder
[2] Electrode supporting arms
[2] HF connection cables
[1] Mains cable
[1] Operating instructions
[2] Plate electrodes 16.5 cm
Microwave therapy

Therapy with microwaves is classified as high frequency therapy. The one thing the varying frequencies used in high frequency therapy have in common is the fact that warmth is created in the tissue under their influence. Microwaves are applied using the radiation field method, which applies beams of electromagnetic waves to the tissue depending on the usage of emitters of varying shapes and sizes. The energy from these waves is directly absorbed in the tissue and makes it warm. The penetration of the microwaves is inferior compared to shortwaves. Microwave therapy is the preferred application if you want local heating of the muscles or connective tissue structures, such as ligaments, sinews, capsules, etc.
PHYSIOERTHERM-M

High-standard microwave therapy

The modern PHYSIOERTHERM-M microwave therapy unit enables continuous and pulsed energy output for thermal and athermal applications and features automatic output limitation. The extremely well-shielded, high-frequency connection cable provides troublefree operation. The smooth running castors with latches ensure good mobility and secure positioning of the PHYSIOERTHERM-M.

The easily adjustable supporting arms ensure quick and exact emitter placement. The high-quality and precisely manufactured connectors make it easy to change the emitter.

Knee treatment with omnidirectional emitter
**SPECIAL FEATURES**

**MICROWAVE THERAPY**
- Continuous or pulsed energy output
- Automatic output limitation

**ACCESSORIES**
1. Synclinal emitter for medium and large treatment areas
2. Omnidirectional emitter (diameter: 16 cm) for local disease processes
3. Small emitter (diameter: 6.5 cm) for small areas and ENT applications

**GENERAL FEATURES**
- Intuitive operation
- Comprehensive overview of the therapy parameters
- Fastest therapy start

Traction therapy

Traction or decompression therapy has been successfully used in physical medicine for centuries. The main application areas are cervical, lumbar and hip joint therapy. The recognised spinal traction therapy effects relief to the spine and surrounding tissue. Reducing pressure on the intervertebral foramen (IVF) relieves the intervertebral discs and soothes irritated nerves. Conventional methods are mostly based on traction forces on the vertical plane, which in combination with the strong physical stressing of the patient, may cause psychogenic muscle tension and blood stasis. By contrast, horizontal traction provides patients with a pleasant treatment alternative, permitting both exact metering and pulsed or dynamic intermittent traction relief.

A combination of traction and high frequency therapy can achieve cumulative and potentiating effects.
Using the TRACComputer, traction is applied on the horizontal plane, while exact metering is possible due to the application of relief-bringing intermittent and pulsed traction. Aside from 60 programs with various traction sequences, individual therapy times, patient weight and pulse frequency can be entered over the control key pad. The gentle gradual increase of traction avoids psychogenic stress to the patient. Furthermore, during relaxation periods, minimum traction is maintained to provide permanent relief to the joint for the duration of the treatment.

Besides lumbar and cervical traction, with additional accessories the hip can also be treated. For safety sake, prior to treatment the patient is handed the emergency off switch.

The MiLi microwave therapy unit can be used with the TRACComputer or on its own. The electromagnetic waves are directly converted into heat in the lower-lying water-containing tissue for an elasticising effect and metabolic stimulation of structures surrounding the spinal cord, coupled with hyperaemisation and increased phagocyte function.

The following configurations are available:

» Traction therapy unit TRACComputer with couch and diathermy unit MiLi
» Traction therapy unit TRACComputer with couch
» Diathermy unit MiLi with couch
SPECIAL FEATURES

TRACTION THERAPY / TRAComputer

- Intermittent and dynamic pulsed traction
- Individual setting of traction power, pulsation and treatment time
- Lumbar and cervical traction
- Optional: hip joint traction
- Patient’s weight can be taken into account
- Emergency-off switch

GENERAL FEATURES

- Intuitive control with touch screen and numeric keypad
- Comprehensive overview of the therapy parameters
- Fastest therapy start: direct program selection or over patient card (option)
- Extensive program selection with visualisation of traction charts
- Option: patient card for saving personal therapy programs

MICROWAVE THERAPY / MiLi

- Power output in ten steps from 20-200 W
- Three separately selectable treatment areas across couch
- Stationary or cyclical automatic longitudinal treatment: easy individual adjustment of the defined treatment zone
- Automatic metering monitoring

GENERAL FEATURES

- Intuitive operation with touch screen
- Comprehensive overview of the therapy parameters
- Fastest therapy start: direct or through indications index

TRACTION COUCH

- Rolling section to avoid frictional losses
- Height-adjustable leg rest with belt
- Height-adjustable head rest
- Pillow
- Shelf for accessories

TECHNICAL DATA

TRAComputer:
- Protection class: 1, type B
- Power connection: 230 V ± 10 %
- Mains frequency: 50 Hz
- Current consumption: 350 mA
- Power consumption: 80 VA
- Traction: 1-60 daN
- Dimensions (W x H x D): 190 x 1050 x 560 mm
- Weight: 18 kg

MiLi:
- Protection class: 1, type B
- Power connection: 230 V ± 10 %
- Mains frequency: 50 Hz
- Current consumption: 2.2 A
- Power consumption: 720 VA
- Operating frequency: 2450 MHz
- Power output max.: 200 W
- Dimensions (W x H x D): 340 x 250 x 850 mm
- Weight: 28 kg

Traction couch:
- Dimensions (W x H x D, without leg rest): 830 x 970 x 2120 mm (without TRAComputer); 830 x 970 x 2240 mm (with TRAComputer)
- Load capacity of treatment surface: 160 kg
- Weight: ca. 75 kg

STANDARD ACCESSORIES

- Emergency-off switch
- Leg rest with belt
- Operating instructions
- Pillow
- Shelf for accessories
- Traction set cervical spine
- Traction set lumbar spine

For TRAComputer, MiLi and traction couch:
Cryotherapy is based on surface cooling and thus local reduction of tissue temperature. Cold air therapy uses a continuously cooled stream of air within a constant temperature range, which results in a series of thermoregulatory effects that differ from other cold application forms (e.g. ice or cold packs) and are desirable for various indications, including acute and chronic pain (especially in sport physiotherapy) and rheumatism. Cold air therapy is also used to cool the skin surface during laser treatment.

In detail, there are the following specific physiological effects of cryotherapy with cold air flow:

- Reduction in the sensitivity of sensory nerves
- Reduction in nerve conduction
- Immediate vasoconstrictive effect
Environmentally friendly cryotherapy in a compact design

The compact FRIGOSTREAM cryotherapy unit offers optimised performance in a minimum of space and is available in five different versions. It generates cold air with an adjustable current of air of up to 1500 l/min and thus enables targeted cooling of body areas with the recognised advantages over CO₂ and ice packs. If used correctly the risk of cold damage is excluded.

FRIGOSTREAM operates with an energy source that costs nothing - air - and is therefore always ready for use and has no resource replenishing problems. Like an air conditioning system, the ambient air is cooled down and blown onto the skin through a treatment tube without direct contact at temperatures of up to −60 °C (see technical data). Various tubes and nozzles permit easy targeted treatment.

The de-icing function, which requires no water emptying on the user’s part (with the exception of C200/C600), is particularly user-friendly. The FRIGOSTREAM line refrigerant loop is a closed system and requires no maintenance whatsoever.
CRYOTHERAPY

Cold air from -32 °C to -60 °C
Adjustable stream of air up to 1500 l/min.
Very short cooling down phase
De-icing function
Maintenance-free refrigerant loop
Standard slotted nozzle
1. Nozzle attachments in three sizes for effective treatment
2. Flexible, double-wall tube (1.70 m long)
3. Therapy arm for fast and easy placement of the tube over a clip-on system (option)
4. FRIGOSTREAM is also available with a special smaller diameter tube to maintain cooling at a constant level over an extended period for thermal laser treatments

GENERAL FEATURES

Intuitive operation
Touch screen

TECHNICAL DATA

FRIGOSTREAM, FRIGOSTREAM Premium and Turbo:

Protection class 1, type B
Power connection 230 V ±10 % or 110 V ±10 %
Mains frequency 50 – 60 Hz
Power consumption 650 W (500 W**, 850 W***)
Cooling capacity up to -32 °C (-40 °C***)
Air capacity 350 – 1500 l/min.
Dimensions (W x H x D) 360 x 930 x 480 mm
Weight 53 kg

* Turbo only 230 V ±10 %  ** Premium  *** Turbo

FRIGOSTREAM C200 und C600:

Protection class 1, type B
Power connection 230 V ±10 %
Mains frequency 50 – 60 Hz
Power consumption 900 W (1400 W*)
Cooling capacity up to -40 °C (-60 °C*)
Air capacity 350 – 1500 l/min.
Dimensions (W x H x D) 380 x 1020 x 540 mm
Weight 65 kg (80 kg*)

*C 600

Magnetotherapy

With therapeutic magnetic field devices, pulsating magnetic fields (PEMF) can be applied at various frequencies and intensities. Coils and applicators of different sizes can also be used.

Magnetic field therapy can produce the following effects:

- Pain relief
- Suppression of inflammation
- Acceleration of healing processes
- Stimulation of blood circulation
MAG-Expert

Two-channel magnetotherapy

MAG-Expert provides magnetic field treatment with a field-strength of 1–100 Gauss (adjustable in steps of one Gauss) and a frequency range from 1–100 Hz, with two completely independent channels and a treatment timer. Cylinders of different sizes as well as high performance applicators are available to maximise the efficiency of treatment.

MFC technology focuses the magnetic fields almost entirely on the inside of the cylinder. This avoids unnecessary exposure of the treatment team.

Magnetotherapy with set of applicators
**SPECIAL FEATURES**

**MAGNETOTHERAPY**
- Magnetotherapy from 1-100 Gauss
- Therapy frequency from 1-100 Hz
- Two independent channels
- MFC technology for focussing magnetic fields
- Extremely stable treatment couch with pillow and hydraulic system for opening and easy installation of the coil
- Precisely manufactured sliding for easy and comfortable positioning of the coil

**GENERAL FEATURES**
- Intuitive PHYSIOMED one-button operation
- Comprehensive overview of the therapy parameters
- Fastest therapy start: direct, through program memory or indications index
- Extensive treatment index with dosage proposals

Cylinder, Ø 60 cm and therapy couch for magnetic field therapy of the spine, pelvis and the whole body

Cylinder, Ø 30 cm for magnetic field therapy of the limbs and head

Applicator set available for local treatment
DEEP OSCILLATION® is a unique international patented non-invasive, non-traumatic therapy method. Its special structure allows you to create biologically effective oscillations in the treated tissue using electrostatic attraction and friction. In contrast to other therapies, these pleasant oscillations have a gentle and deep-acting effect on all tissue components (skin, connective tissue, subcutaneous fat, muscles, blood and lymph vessels).

For the treatment, the patient holds a titanium neutral element loosely between the fingers. The pleasant therapy effect of DEEP OSCILLATION® is created beneath special gloves of the therapist or a specially designed hand applicator (second contact) circling over the tissue.

The following effects of DEEP OSCILLATION® are clinically proven:

» High pain-reducing potential (both for acute traumatic and chronic pain syndromes)
» Prevention and reduction of secondary and primary lymphoedema
» Anti-inflammatory effect
» Preventive fibrotic conversion processes, fibrosis reduction
» Muscular relaxation, movement-promoting effect, mobilisation
» Promotes wound healing, particularly for secondary wounds and burns
» Normalisation of haemodynamic skin parameters and influence on biological ageing through preventive impact on premature ageing

The exceptionally gentle action, early implementation and specific clinical effects make DEEP OSCILLATION® a unique therapy option, which is being used increasingly in medical fields that are not typically focused on by conventional physical therapies.
Fields of application of DEEP OSCILLATION®:

PRE- AND POSTOPERATIVE THERAPY
With DEEP OSCILLATION®, oedemas and haematomas can be relieved pre- and postoperatively considerably faster than with conventional therapies. Because it can be used at an extremely early stage, wound healing is stimulated and accelerated, local inflammation processes are inhibited and pain is significantly reduced over a sustained period. Scar quality is improved. DEEP OSCILLATION® is therefore frequently used as a routine adjuvant post-operative therapy, for instance in oncology, neurology and traumatology. Due to its very gentle therapeutic effect it is used as a first line therapy for conditions after e.g. mastectomy, Caesarean section, osteosynthesis, endoprosthesis etc.

LYMPHOEDEMA
Use of DEEP OSCILLATION® reduces volume in the case of primary and secondary lymphoedema. The therapy is also increasingly used with success for lipoedema. DEEP OSCILLATION® has a preventive and anti-fibrotic effect: incipient fibrosis in particular can be treated effectively. Skin conditions and lymphatic drainage are improved.

MECHANICAL TRAUMATA AND DAMAGE FROM OVERSTRAINING
In the case of trauma and damage from overstraining, DEEP OSCILLATION® has a direct oedema- and pain-reducing effect and consecutively stimulates self-mobilisation in pain-relieved areas, thus enabling an early return to active life. For sports persons it means an earlier commencement of active forms of therapy and training, for ‘normal’ patients a swifter return to activities in daily life.

TRAINING AFTERCARE AND PERFORMANCE STABILISATION IN SPORT
In training aftercare, DEEP OSCILLATION® is known for its rapid, muscle-relaxing and pain-relieving effects, and for its direct effect against microtrauma (muscle aches). Roughage and cell remains are removed more quickly through the treatment. This promotes a more effective nutritional supply to the muscle cells, thus accelerating the restoration to optimal performance. Regeneration times in the systematic training process can thus be reduced.

SECONDARY WOUND HEALING
DEEP OSCILLATION® is being increasingly used for secondary wound healing, regrettably often as a last resort. DEEP OSCILLATION® is an efficient adjuvant treatment option in the case of both post-operative and diabetic wound healing disorders and oedema-induced secondary wound healing.

BURNS
In the case of second-degree burns wound healing is significantly accelerated and qualitatively improved by DEEP OSCILLATION®.

CHRONIC PAIN SYNDROMES
In indications such as fibromyalgia syndrome, Sudeck’s dystrophy etc., which are accompanied by chronic pain, DEEP OSCILLATION® has a strong pain relieving effect, which often allows for a reduction of medicine intake. The treatment promotes mobilization to a great extent, alleviates muscle stiffness and tackles impairments in activities of daily life, with consequent positive effect on fatigue, fears and depression.

NEUROREHABILITATION
In brain stoke rehabilitation DEEP OSCILLATION® is used for semi-paralysed regions of the body to improve trophicity and reduce spasms in affected areas, and also for lymphatic drainage, for instance to treat lymphoedema in the head area. The therapy is also used with great success for children with cerebral palsy and tetraplegia to reduce spasms and treat bowel obstipation.

DEEP OSCILLATION® is recommended by:
Lymphedema Clinic Wittlinger

Center for excellence in lymphedema treatment
Lymphedema rehabilitation center – Treatment Academy – Training – Research

WITTLINGER

DEEP OSCILLATION®
DEEP OSCILLATION®
Evident

Two-channel deep oscillation unit for professional use

DEEP OSCILLATION® Evident allows you to begin treatment with maximum speed and ease: direct selection of deep oscillation parameters, over the indication index or program memory. During treatment you have a constant overview of all values and timers. With decades of proven use, the PHYSIOMED one-button operation allows fast intuitive operation in combination with the touch screen.

Deep oscillation characteristics can be adjusted precisely to the desired treatment over the individual setting of frequency (or frequency band), duty cycle, burst function and therapy duration. The extensive indication list with practical information, graphics, animations and patient database with ‘potpourri’ function additionally ease use.

Up to three indication menus can be selected for DEEP OSCILLATION® Evident:

» CLINICS (for use in clinics, hospitals and physiotherapy practices)
» SPORTS (for use in sport medicine centres and clinics)
» AESTHETICS (for use in aesthetic medicine)
SPECIAL FEATURES

DEEP OSCILLATION®

Two-channel deep oscillation
Frequency range from 5-250 Hz
Individual setting of frequency, frequency bands, duty cycle, duration of therapy and burst function
Contact elements made from biocompatible titanium

Special hand applicators in two sizes for all-over and local treatment
Easily interchangeable treatment membranes guarantee a hygienic application

Individual programmes as well as suggested treatments from the indication index can be easily stored on the DEEP OSCILLATION® therapy card and used with DEEP OSCILLATION® Personal

GENERAL FEATURES

Perfected user guidance through combination of touch screen and PHYSIOMED one-button operation
8” colour monitor
Swivel and tilt mount for optimum monitor alignment at all times
Comprehensive overview of the therapy parameters including all therapy timers
Fastest therapy start: direct, through program memory or indications index
Treatment index with intelligent filtering functions based on body region or per alphabet for quick location of the desired treatment proposal

Extensive therapy and dosage suggestions and detailed animations illustrating treatment, which can be viewed during therapy at the touch of a button
Patient database for max. 100 entries: up to 5 treatment levels can be saved and configured as potpourris per patient
Multifunctional intensity controls with emergency stop function and quick switching between channels

TECHNICAL DATA

Protection class 1, type BF
Power connection 100 - 240 VAC ± 10 %
Mains frequency 50 / 60 Hz
Current consumption 0.1 A (at 230 V) or 0.2 A (at 115 V)
Power consumption 20-30 VA
Output voltage max. 400 V
Load impedance 10 MΩ
Output frequency 5 – 250 Hz
Dimensions (W x H x D) 260 x 350 x 370 mm (monitor unfolded)
Weight 6.2 kg

STANDARD ACCESSORIES

DEEP OSCILLATION® Personal

Deep oscillation unit for mobile use or to continue treatment at home

DEEP OSCILLATION® Personal can be used to read and retrieve program sequences previously written on the DEEP OSCILLATION® therapy card with the DEEP OSCILLATION® Evident unit in the clinic. This enables personalised mobile therapy on the ward and continuation of treatment in the patient’s home according to the desired specifications. This way you can guarantee the sustainability of your treatments until the next appointment in your clinic or treatment room.

DEEP OSCILLATION® Personal is also available with therapy cards featuring pre-programmed treatments, which generally consist of various treatment phases and different frequencies. The following application areas are available:

- SPORTS (for use in sport medicine and physiotherapy practices)
- POSTPARTUM (for use with postpartum breast pain, galactostasia, pregnancy-induced problem areas and optimised wound healing following Caesarean section)
- AESTHETICS (for use in aesthetic medicine)
SPECIAL FEATURES

DEEP OSCILLATION®

Clinical effects and studies

PAIN REDUCTION
Many medical studies show that DEEP OSCILLATION® reduces pain. The effect in the case of trauma-induced pain is seen in a reduction of noxious inflammatory potential (inflammation syndrome and, among other, Calor, tissue acidosis and prostaglandin) of TRPV1 pain receptors, explained by the mechanical distribution and intensified interstitial drainage via DEEP OSCILLATION®.

In an ex-vivo study Boisnic and Branchet (2013) found significantly fewer TRPV1-expressing keratinocytes than in the control group following DEEP OSCILLATION® treatment. The findings from ex-vivo skin models also confirm a statistically significant pain-reducing potential through DEEP OSCILLATION®.

VOLUME CHANGE
Several studies confirm the oedema-reducing effect of DEEP OSCILLATION®. Oscillation effects a 'stirring' of the basic substance, thus promoting the removal of interstitial fluid and substances (proteins, cell debris, neurotransmitters etc.). Interstitial septa and fissures are kept open by the mechanical activation, which helps interstitial drainage. This significantly reduces both local oedema and aseptic inflammation. Proof was also established of a significant reduction in swellings in the area of the wound, due to the treatment. In chronic conditions the treatment helps to disperse fibrosis and to diminish hardening of the tissue.

Ex-vivo tests show that DEEP OSCILLATION® also results in a significant reduction of dermal oedema compared to the control group. Significantly lower values than in the control group were also recorded in the histological evaluation of the percentage of dilated capillaries in the treatment group. Clear differences were likewise established in a histological planimetric measurement of the surface of dilated dermal capillaries (Boisnic and Branchet 2013). The findings suggest a vasomodulating effect (moderate vasoconstriction) of capillaries as a mechanism with an anti-oedematous effect prompted by deep oscillation.
The physiological effectiveness of DEEP OSCILLATION® has been documented in numerous publications based on experimental and clinical studies:

MAGCELL® is a portable hand device for electrode-free electrotherapy. Magnetic alternating fields are produced over rotation by permanent magnets. A sinusoidal pulsating electromagnetic field (PEMF) is generated over the special magnet arrangement and device function principle. However, with a value of 0.105 tesla field strength it is many times higher than for commercially available magnetic field therapy devices with coils or mats, which generally operate with field strengths of maximum 100 gauss or 0.01 tesla. By contrast MAGCELL®-therapy units produce field strengths, which are generally stronger by factor 10 than these devices.

According to induction law induced time-variable magnetic fields induce electric fields. The physical effects of MAGCELL® derive from the electric fields produced in living cells and tissue based on induction law. Depending on tissue conductivity the field incites an electric current. Taking into account the specific conductivity for various body tissue and liquids, this electric current can be calculated. Its strength, or more precisely, current density (= current strength per area, A/m²) determines biological effectiveness. All calculated current densities exceed 10 mA/m² and are thus within the range of effects internationally confirmed and classified as ‘good’: above the ‘subtle biological effects’ and within the range of ‘confirmed macro effects’ (10-100 mA/m²). Induced current densities are much higher again in blood and body fluids. The term ‘electrode-free electrotherapy’ for MAGCELL® derives from the distinctly strong induced current densities and exceeding of the threshold value of 10 mA/m²: both of which are not found on equipment using coils or mats.

All calculated current densities exceed 10 mA/m² and are thus within the range of effects internationally confirmed and classified as ‘good’: above the ‘subtle biological effects’ and within the range of ‘confirmed macro effects’ (10-100 mA/m²). Induced current densities are much higher again in blood and body fluids. The term ‘electrode-free electrotherapy’ for MAGCELL® derives from the distinctly strong induced current densities and exceeding of the threshold value of 10 mA/m²: both of which are not found on equipment using coils or mats.

Further clinical effects

A dog’s prostate gland serves as animal model in the case of irregularities in the growth of the human prostate. In a study (Leoci et al. 2014) benign prostatic hyperplasia (BPH) symptoms improved significantly in respect of prostate volume reduction without influencing semen quality, testosterone behaviour or the libido. Another clinical and experimental study (Funk et al. 2014) confirms that MAGCELL® MICROCIRC also significantly boosts micro-circulation even widens the blood vessels. The authors recommend the therapy for clinical situations where an improvement in micro circulation is identified, like for instance in the case of chronic tissue repair.

REFERENCES

MAGCELL® ARTHRO significantly improves general symptoms (WOMAC total score) and individual scores for pain, stiffness and daily activity in osteoarthritis (ARC criteria II and III). The therapy can be applied several times daily as a complementary treatment without side effects and may thus help to reduce intake of pain medication.

In a randomised controlled study on the effect of MAGCELL® ARTHRO for knee arthritis with osteoarthritis level 2.8±0.8 (American College of Rheumatology criteria) at the primary clinical end point (WOMAC total score) median increase of 0.7 P (non-significant) was recorded in the placebo group between T0 and T1 (18 days), yet in the MAGCELL®-group a significant local decrease of 21.8 P. During the study no undesirable incidents or side effects occurred related to therapy.

The WOMAC individual scores for pain, stiffness and daily activity also resulted in significant local improvements in the MAGCELL®-group compared to a slight median increase (non-significant) in the placebo group. A highly significant result (p < 0.001) in favour of the MAGCELL®-group was recorded for the individual parameter pain reduction compared to the placebo in the difference between the beginning and end of treatment.

Special features, technical data and standard accessories are identical to MAGCELL® MICROCIRC

MAGCELL® MICROCIRC can positively influence symptoms of neurotoxicities like sensory ataxia, neuropathy and neuropathic pain symptoms (especially CIPN I-IV) on hands and feet as a result of chemotherapy. Moreover a significant increase in nerve conductivity speed (ulnar nerve) was achieved by the treatment.

BLOOD FLOW STIMULATION
Source: Funk et al. (2014)

MAGCELL® MICROCIRC significantly increases micro-circulation (p < 0.001) while nitric oxide (NO) has a blood vessel dilatory effect. The authors recommend the therapy for clinical situations where an improvement in micro circulation is identified, like for instance in the case of chronic tissue repair.

STANDARD ACCESSORIES

- [2] Batteries
- [1] Metal case
- [1] Operating instructions

SPECIAL FEATURES

ELECTRODE-FREE ELECTROTHERAPY
- Electrode-free electrotherapy for therapists and patients
- Pulsating electromagnetic fields (PEMF)
- Field strength more than 1000 gauss
- Effective treatment concept due to repeatable short-treatment periods
- Through-textile treatment (even through shoes)

GENERAL FEATURES

- Very easy one-button operation
- Battery-driven
- Optical and acoustic function control
- Automatic switch-off at the end of the therapy period
Diagnosis-supported therapy with vocaSTIM®

Accelerated regeneration following larynx pareses. Application possibility for dysphagia and dysarthric disorders.

THE vocaSTIM® CONCEPT

vocaSTIM® is a concept for the diagnosis, therapy and therapy process control of larynx pareses. Following anamnesis, diagnosis and instruction by a doctor or therapist, the patient can normally continue autonomous therapy or voice training independently. Process control is carried out at regular intervals by the attendant therapist.

Standardised therapy with Neuro Muscular Electro Phonatory Stimulation (NMEPS) according to Prof. Pahn is based on electrostimulation of the damaged musculature in the form of intentional exercises. While the patient attempts to trigger voluntary contraction (phonation exercise from CD), at the same time, a supporting electric pulse is triggered manually be means of a manual release key. The current parameters used are determined by a diagnostic procedure which is carried out initially and as part of therapy progress control. The parameters are customised exactly to the indication and degree of damage.

LARYNX PARESES

Larynx pareses are peripheral paralyses or partial paralyses of voice-relevant muscles. They result in voice disturbances or even complete voice loss and often cause obstructed breathing. Larynx pareses can result as a consequence of struma operations and operations to the head or neck (cervical spine), numerous other indications, or have an idiopathic genesis.

FURTHER APPLICATIONS

vocaSTIM® can also be applied for difficulties in swallowing (dysphagia) and dysarthric disturbances due to pareses of the cranial nerves V, VII, IX, X, XI and XII.

Neuro Muscular Electro Articulatory Stimulation (NMEAS) is electrostimulation in the form of intentional exercises with articulatory exercises.

IMPROVEMENT OF VOICE QUALITY WITH LARYNX PARESES

Compared to conventional voice therapy, the 3-month treatment with vocaSTIM® for unilateral larynx pareses leads to a significant improvement to the irregularity index (CFx).

SOURCES

The physiological effects of vocaSTIM® have been documented by numerous publications based on clinical studies.

Diagnosis-supported therapy with vocaSTIM®
vocaSTIM®-Master
vocaSTIM®-Trainer

Electrotherapy-supported diagnosis, therapy and follow-up for larynx pareses

The vocaSTIM®-Master allows you a rapid automated diagnosis of the degree of damage to the paretic musculature. The resulting optimum current treatment parameters are generated automatically and can be selected and determined using the comprehensive indications index, together with a variety of phonation exercises. Pictures of electrode application make therapeutic use easier.

For the continuation of treatment and voice exercises at home, the obtained values can be saved on the patient’s therapy card. Using the therapy card, the vocaSTIM®-Trainer patient device reads in the exact treatment prescribed by the therapist and is locked automatically after the prescribed number of exercises have been performed. The attendant therapist can check compliance using the therapy card.
SPECIAL FEATURES

ELECTROTHERAPY

Coordinated therapy concept consisting of a master (doctor) and trainer unit (patient)

One-channel electrotherapy including 9 medium- and low-frequency currents (G, UR, IG 30, IG 50, FM, FaS, T/R, AMF and MT)

Diagnosis and treatment of larynx pareses and difficulties in swallowing

Voice training supported with electrotherapy with phonation exercises from CD

Therapy progress control of the patient also for treatment at home

Differentiated diagnostics menu with grading of degrees of damage and metering of accommodation quotient

Manual release key for emergency shut-off or intentional exercises

GENERAL FEATURES

Intuitive PHYSIOMED one-button operation

Comprehensive overview of the therapy parameters

Fastest therapy start: direct, through program memory, patient smart card or indications index

Extensive treatment index featuring therapeutic information, dosage proposals and application graphics

Patient database and potpourris

STANDARD ACCESSORIES

1. Accessory tray
2. CD-player
3. Elastic velcro strap (10 x 125 cm)
4. Elastic velcro straps (5 x 60 cm)
5. Footswitch for diagnostics
6. Mains cable
7. Manual release key
8. MP3-CD with functional exercises
9. Multiple socket
10. Operating instructions
11. Patient lead with sling
12. Plate electrodes EF 10
13. Plate electrodes EF 50
14. Set of punctiform electrodes incl. grip handle and viscose covers
15. Speaker
16. Therapy instructions
17. Viscose covers EF 10
18. Viscose covers EF 50
19. visuCARDS

Configuration of accessories depends on country

TECHNICAL DATA

Protection class 1, type BF
Power connection 230 V ± 10% or 115 V ± 10%
Mains frequency 50 – 60 Hz
Current consumption 0.3 A (at 230 V) or 0.6 A (at 115 V)
Power consumption 68 VA
Power output, stimulation current max. 75 mA at 500 Ohm, G = 25 mA at 500 Ohm
Dimensions (W x H x D) 345 x 133 x 348 mm
Weight 5.1 kg

Electrode application for a unilateral larynx paresis
## Additional accessories for electrotherapy

Trolleys

The functional PHYSIOMED trolleys are characterised by their excellent stability. Lockable smooth-running castors ensure good mobility.

Additional accessories can be conveniently stored in the easily accessible swivel-out front, and the cables can be straightened without removing them. The four feet of the Evident units fit exactly into the depressions provided in the trolley and together with the locking system ensure the stability of the unit.

The Expert trolleys are available with a spacious drawer and/or customised rack for the PHYSIOVAC-Expert vacuum application unit.

The Jubilee trolley is only available with a spacious drawer and customised rack for the PHYSIOVAC-Jubilee vacuum application unit.

The Universal trolley with its three shelves and a spacious drawer provides lots of room for your equipment and all the additional accessories.
